

Functionality Checklist

Landing Page

- ☐ Login area with integration for support to login with common accounts such as Facebook, Google, Twitter, Github, etc as supported by Meteor's login module.
- ☐ Unsuccessful login throws error, successful login directs right to the user home page.

User Account

- ☐ Basic User accounts will be created and modeled in the database to test account functionality.
- ☐ User home page for the first phase will display all journal entries in chronological order with a subset of the more basic filters (entry type, date of entry, location, and by custom user-generated tags)
- ☐ List of entries can be manipulated via menu with checkboxes for selecting entries, and a delete button to remove all selected entries.
- ☐ Delete button sends entry to trash
- ☐ Edit button triggers edit form much like the new entry form for the given entry type

User menu at top of page

- ☐ Button to create new entries including a select menu for commonly used entry types, clicking this launches form to create new entry (as described in section 3.2.1.4).
- ☐ Filter menu where a combination of tags and criteria can be applied to limit the subset of entries visible.
- ☐ Button to create new tags

Basic Journal Entries

- ☐ Notes Entry Boxes
- ☐ Tasks Entry Boxes
- ☐ Event Entry Boxes
